- **DISCLAIMER**

Before you proceed to any other section of this document we urge you to read this disclaimer, understand it and its meaning, thank you. This portion is designed in a simplified manner so that its contents can be understood by anyone who reads it. It will present to you pertinent and relevant information to our platform and gives everyone eligible the choice to decide if they want to be a part of our project based on their judgment.

The information presented and provided in this document are not provided as a means of solicitation or a contractual relationship of any kind. It does not constitute a prospectus and doesn't provide a means for buying securities of any kind. This platform does not provide protection of any kind to any individual and all supporting documents have been written 'as is' for providing information to the general public. Regarding the information provided in this website and supporting documents, there are no warranties of any kind provided along with our project and its connected services.

This is still a project under implementation so some of the estimates and projections made may be future statements that currently have not been brought into realization. These projections might be speculative and uncertain and may in turn bring about differences between what is being documented and real life events.

All the information provided on our website and its supportive documents cannot be declared historical facts but due to the nature of the project, these declarations are based on assumptions and total accuracy of prediction may not be fully guaranteed. Always ensure to consult your legal guardian before investing in any form of cryptocurrency to avoid penalties from the government. The token sales and general cryptocurrency transactions on our platform will only be made available to those who are legally qualified to purchase and hold cryptocurrency in their country.

Always ensure to understand the law of the land regarding digital currency before initiating a purchase. Ineligibility to hold cryptocurrency will most mean that it may be an offence to also buy cryptocurrency so we strongly advise you to consult your lawyer and be aware of your status regarding this.

In a scenario that you purchase our cryptocurrency without obeying the rules guiding cryptocurrency utilization in your area of residence, you risk legal actions being taken against you and this might mean heavy fines or more extreme penalties being passed. In such a situation, ANE executives and its team members will not claim liability on your behalf as you have been advised to understand the guidelines concerning purchasing and holding digital currency before taking any action.

Whatever consequences arise as a result of your actions will be yours to bear alone. Purchasing under illegal circumstances may lead to your digital currency being confiscated and your actions might incur legal consequences. On this account we would like to let you know that whatever action and steps you take concerning ANE token will be at your risk and with your discernment.

All information provided here have been reviewed by our team members and we have deemed it fit to be accurate to the best of our knowledge, however, acting upon the information provided on this website and its supportive documents means that you are aware of the various risks that befall cryptocurrencies and you fully understand them. If you do not understand the risks that come along with the buying of cryptocurrency, then we suggest you make your findings and fully understand these risks before buying as they cannot all be listed out here for brevity of this document. However, we will point out some of the risks that may be involved in purchasing digital currency. Technical difficulties may occur and may result in downtime during transaction processing which might at that moment be temporarily beyond us. During a period of downtime, users might experience issues with processing transactions.

Security risks may also surface as users are required to secure their wallet information. If a user does not take precautionary measures before accessing his portal, private information could get stolen coupled with other relevant data and as such unauthorized access could be gained into the individuals account and funds may get carted away with. Security risks can

range from exploitable server vulnerabilities, malware attacks and providing sensitive information to third party personnel.

The ANE team shall not be held responsible for losses or damages incurred as a result of falling victim to the various risks and uncertainties associated with the purchase of our cryptocurrency.

The information provided here may be subject to translations from time to time and translation of this website and its documents in relation to this project may be made available in other languages besides the original (English). If a dispute arises as a result of inconsistencies in other versions or translations of this document, we shall use the English version as final reference.

All announcements regarding our project and its relevant documents including this whitepaper will be made available on our website and our official social media platforms. We urge our readers to discard any external information from any source unless the credibility of the information or the source is confirmed by us on our website or from our representatives.

By reading this disclaimer, you expressly agree that you comply with all that have been stated and will comply strictly to them to the fullest extent applicable by the law and will totally comply to the terms and conditions laid down.

- WHAT IS CRYPTOCURRENCY?

Cryptocurrency is decentralized digital money that is based on blockchain technology and secured by cryptography. To understand cryptocurrency, one needs to first understand three terminologies – blockchain, decentralization, and cryptography.

In simple words, blockchain in the context of cryptocurrency is a digital ledger whose access is distributed among authorized users. This ledger records transactions related to a range of assets, like money, house, or even intellectual property.

The access is shared between its users and any information shared is transparent, immediate, and “immutable”. Immutable means anything that blockchain records is there for good and cannot be modified or tampered with – even by an administrator.

Centralized money refers to the regular money that we use, which is governed by authorities like the Reserve Bank of India. Decentralization in cryptocurrency means there is no similar authority that can be held responsible for supervising the rise and fall of a particular cryptocurrency. This has many benefits over centralized money.

Some of these benefits include the following:

- There is no need for currency owners to “trust” a single governing entity, as everyone in the network has access to the same information that cannot be altered.
- Data remains accessible only to the users of the network and it is heavily secured. Shared ownership also means all users sign off on how accurate the data is, which means there is very little scope for data mismanagement or miscommunication. Think of it as a democracy.
- Security, which is a fundamental part of a blockchain.

Cryptography is the method that secures data from unauthorized access by the use of encryption techniques. Most of the claims that blockchain makes, like privacy and immutability, are enabled through cryptography.

The roots of cryptocurrency technology can be traced back to the 1980s with the invention of what is called a “blinding algorithm”. The algorithm is all about secure and immutable digital transactions. It remains fundamental to the modern-day digital currency.

In 2008, a group of people (currently known under the pseudonym Satoshi Nakamoto) created the guiding principles of the first and leading cryptocurrency in the market today, Bitcoin. In 2009, Bitcoin was launched to the world. But it would be years before it was formally recognized as a means of payment among leading merchants, starting with WordPress in 2012. The underlying blockchain technology is today used in banking, insurance, and other business sectors. Growing at a compounded annual growth rate of 12.8% since 2021, the cryptocurrency market is estimated to reach \$4.94 billion by 2030, thanks to the need to improve the efficiency of today’s payment systems, rise in global remittances and increased need to secure data.

- HOW DOES CRYPTOCURRENCY WORK?

Cryptocurrencies are not controlled by the government or central regulatory authorities. As a concept, cryptocurrency works outside of the banking system using different brands or types of coins – Bitcoin being the major player

- **MINING**

Cryptocurrencies (which are completely digital) are generated through a process called “mining”. This is a complex process. Basically, miners are required to solve certain mathematical puzzles over specially equipped computer systems to be rewarded with bitcoins in exchange. In an ideal world, it would take a person just 10 minutes to mine one bitcoin, but in reality, the process takes an estimated 30 days.

➤ **BUYING, SELLING, AND STORING**

Users today can buy cryptocurrencies from central exchanges, brokers, and individual currency owners or sell it to them. Exchanges or platforms like Coinbase are the easiest ways to buy or sell cryptocurrencies.

Once bought, cryptocurrencies can be stored in digital wallets. Digital wallets can be “hot” or “cold”. Hot means the wallet is connected to the internet, which makes it easy to transact, but vulnerable to thefts and frauds. Cold storage, on the other hand, is safer but makes it harder to transact.

➤ **TRANSACTING OR INVESTING**

Once bought, cryptocurrencies can be stored in digital wallets. Digital wallets can be “hot” or “cold”. Hot means the wallet is connected to the internet, which makes it easy to transact, but vulnerable to thefts and frauds. Cold storage, on the other hand, is safer but makes it harder to transact.

Cryptocurrencies like Bitcoins can be easily transferred from one digital wallet to another, using only a smartphone. Once you own them, your choices are to :

- A. Use them to buy goods or services
- B. Trade in them
- C. exchange them for cash

If you are using Bitcoin for purchases, the easiest way to do that is through debit-card-type transactions. You can also use these debit cards to withdraw cash, just like at an ATM. Converting cryptocurrency to cash is also possible using banking accounts or peer-to-peer transactions.

● **ANE COIN MISSION**

Revolutionizing crypto with staking, decentralized social media, and the metaverse. Empowering individuals, fostering community, and embracing decentralization. Redefining engagement with crypto, social media, and the digital future.

● **ANE COIN VISION**

To create a decentralized ecosystem where individuals can stake, connect, and explore, fostering financial freedom, community engagement, and immersive digital experiences. Empowering individuals to shape the future of finance, social media, and the metaverse.

- ANE ECOSYSTEM

1. Staking app (USDT & ANE)
2. P2E(Play To Earn games)
3. NFT's
4. ANE Metaverse

- WHAT IS STAKING (ANE AND USDT) ?

Staking is the process of purchasing and holding cryptocurrency in your wallet in order to profit from it. The main advantages of coin staking are passive income generation and low entry. Staking can be simple and easy if you use a staking pool or an online service. It is also much less energy-intensive than mining and much less risky than trading. Staking coins is risk-free because you only lease your coins to the validator while maintaining full control and ownership over them. Coin staking gives currency holders some network decision making power. By staking coins, you gain the ability to vote and earn money. Staking coins is becoming increasingly popular, with many users describing it as "profitable" in the same way that mining is. However, unlike mining, there are no significant overhead or electricity costs.

The Aneras Staking App is a powerful platform that allows users to stake their ANE and USDT coins, earning attractive rewards for their participation. Our app provides a seamless and user-friendly experience, enabling individuals to maximize their earnings and participate in the growing crypto ecosystem.

With the Aneras Staking App, users have the opportunity to stake both ANE and USDT coins.

Our app is designed to prioritize security and transparency. We implement robust security measures to safeguard user assets and personal information, ensuring a safe staking experience. Users can have peace of mind knowing that their staked coins are protected by advanced security protocols.

The Aneras Staking App is built to be user-centric, offering a seamless and intuitive interface. Users can easily navigate the app, stake their coins, and track their earnings in real-time. The app provides comprehensive insights and analytics, enabling users to make informed decisions about their staking strategy.

We believe in fostering a vibrant and engaged community, and our app reflects this commitment. Users can connect with like-minded individuals, participate in

discussions, and share insights on staking strategies. Our community-driven approach encourages collaboration and knowledge sharing, empowering users to make the most of their staking experience.

By combining the earning potential of staking with the versatility of ANE and the stability of USDT, the Aneas Staking App offers a compelling opportunity for individuals to grow their crypto holdings. Whether you're a seasoned investor or new to staking, our app provides a user-friendly gateway to earning attractive rewards on your ANE and USDT holdings.

Join us on the Aneas Staking App and unlock the full potential of your ANE and USDT coins. Start staking today and earn passive income while participating in the exciting world of cryptocurrencies.

- **WHAT IS P2E (PLAY TO EARN) CRYPTO GAMES?**

play-to-earn (P2E) gaming is a new trend in the game industry. Players can farm or collect in-game assets and trade or sell those at their leisure. That concept is made possible through blockchain technology and non-fungible tokens, allowing user-to-user interactions and true ownership of in-game items. In addition, any item can be sold for cryptocurrency, which you can convert to real money. It may be possible to make an income from these blockchain games in some countries. More specifically, there have been P2E players who made more from a video game than they would by working all month. Of course, that concept will not translate well to every part of the world, but there are money-making opportunities out there for most people. Players will often need to acquire one NFT to play the game and make enough money to recuperate that investment. Not all games make that possible unless one dedicates hours upon hours a day to play. Various types of games have embraced the play-to-earn model. One can play MMORPGs, shooters, action games, fighting games, racing games, and much more. A new form of the gaming industry is taking shape, and even mainstream publishers show an interest in non-fungible tokens for their games. There is merit to this concept, as it empowers players while playing the game, either to collect everything they can find or to try and make money. Ultimately, these play-to-earn games will help blur the line between the real world and the virtual world. Many games want to establish a presence in the Metaverse and on the Web3. Giving people worldwide an opportunity to accrue NFTs and earn an income is an appealing idea. Moreover, NFTs gain more use cases in the crypto industry, including staking options – for more rewards – and using them as collateral for lending or borrowing.

- **Executive Summary:**

Aneras aims to empower users by offering them a staking app, a decentralized social media platform, and a metaverse experience. Through ANE tokens, users can stake their assets, engage with a vibrant community, and explore the emerging metaverse landscape. This white paper provides in-depth information on the project's features and plans.

- **Problem Statement:**

Existing social media platforms lack decentralization, putting user data and content at risk. Moreover, the metaverse industry lacks integration with staking and community engagement. Aneras addresses these issues by providing a decentralized social media platform, staking opportunities, and metaverse integration within a unified ecosystem.

- **Solution: Aneras (ANE)**

Aneras (ANE) is an innovative project that brings together a staking app, a decentralized social media platform, and a metaverse focus. This white paper provides a comprehensive overview of the Aneras ecosystem, outlining its vision, features, and roadmap.

Aneras offers a comprehensive solution by combining a staking app, a decentralized social media platform, and a metaverse focus. The Aneras Staking App enables users to stake ANE tokens and earn rewards. The decentralized social media platform allows users to have control over their data and engage with the community. Additionally, Aneras explores metaverse partnerships, providing users with exciting metaverse experiences.

- **Technology and Architecture:**

Aneras leverages blockchain technology, particularly the Ethereum blockchain, for transparency, security, and decentralization. The ecosystem utilizes smart contracts for staking operations, content management, and governance. Decentralized storage solutions are employed to protect user data and facilitate seamless interaction.

- Tokenomics:

Team Development: 5%

This allocation is dedicated to the development team responsible for building and maintaining the Aneras ecosystem. It supports ongoing technical development, research, and project management.

Marketing & Liquidity Pools: 25%

This percentage is allocated to marketing efforts to promote the Aneras project, increase awareness, and drive adoption. It includes activities such as advertising, influencer partnerships, community engagement, and exchange listings. Additionally, a portion of this allocation is used to provide liquidity for the ANE token on decentralized exchanges, ensuring sufficient market depth.

Airdrops: 5%

This percentage is dedicated to conducting airdrops, where tokens are distributed to the community for free. Airdrops help to raise awareness, attract new users, and incentivize early adoption of the Aneras platform.

Presales & ICO Sale: 15%

This percentage is allocated to the presales and initial coin offering (ICO) stages of the project. It allows participants to acquire ANE tokens at discounted rates, providing early supporters with an opportunity to contribute to the project's growth.

Gaming App Rewards: 20%

This percentage is allocated for rewards and incentives within the Aneras gaming app. Users can earn ANE tokens by participating in the gaming ecosystem, encouraging engagement and fostering a vibrant community.

Founder Coin: 10%

This percentage is reserved for the founders of the Aneras project. It ensures their commitment to the project's long-term success and provides them with a stake in the ecosystem.

Coin Lock for Burning: 20%

This allocation is dedicated to locking a portion of the ANE tokens with the intention of burning them over time. The purpose of this lock is to reduce the circulating supply of ANE tokens, increasing scarcity and potentially driving value appreciation for token holders.

- Use Cases and Applications:

Aneras presents various use cases and applications, including:

- a. Staking:

Users can stake ANE tokens through the Aneras Staking App and earn passive income through rewards.

- b. Decentralized Social Media:

Aneras's decentralized social media platform empowers users, granting them control over their data and rewarding their contributions to the community.

- c. Play To Earn game and NFT's

- d. Metaverse Integration:

- Aneras actively explores partnerships and integrations with metaverse projects, allowing users to participate in virtual experiences and contribute to the metaverse ecosystem.
- In our metaverse land sale, we are pleased to announce that 10% of the proceeds will be distributed among all NFT holders within our ecosystem. This distribution is our way of recognizing and rewarding the support and contribution of our NFT holders.
- The distribution will be conducted in a fair and transparent manner, with each NFT holder receiving a proportional share based on the number and rarity of their held NFTs. The distribution will be carried out periodically, allowing NFT holders to benefit from ongoing sales and activities within the metaverse.
- We believe that this distribution mechanism strengthens the bond between our project and its community. It aligns the interests of NFT holders with the success of our metaverse project, fostering a sense of ownership and participation.
- As we continue to develop and expand our metaverse, we remain committed to creating value for our NFT holders. This distribution not only serves as a reward but also encourages active engagement within our ecosystem.
- Join us in our metaverse land sale, acquire NFTs, and become part of our vibrant community. Together, let's shape the future of the metaverse and enjoy the benefits of our shared success.

- Roadmap and Development Plan:

Phase 1: Foundation and Development

- Conceptualization and project initiation.
- Formation of the core team and advisory board.
- Market research and analysis.
- Development of the project white paper.
- Initial website and social media presence setup.
- Token development and smart contract creation on the Ethereum blockchain.
- Security audits and testing of the token contract.
- Launch the Aneras Staking App, enabling users to stake ANE and USDT coins and earn rewards.
- Community engagement and awareness campaigns.

Phase 2: Airdrops and Presales

- Launch airdrops, distributing ANE tokens to the community, fostering early adoption and engagement.
- Conduct Presale 1, offering early supporters the opportunity to acquire ANE tokens at a discounted rate.
- Further development of the Aneras Staking App based on user feedback and requirements.
- Expand the project's reach through partnerships and collaborations.
- Conduct Presale 2, allowing more participants to acquire ANE tokens at favorable rates.
- Continuation of community engagement activities, social media campaigns, and events like a hackathon.
- Enhance the Aneras Staking App, adding new features and optimizing the user experience.

Phase 3: Token Offering and Expansion

- Conduct Presale 3, ensuring fair participation for interested token buyers.
- Commence the Initial Coin Offering (ICO), providing the broader community with an opportunity to acquire ANE tokens.
- Expand the team to support the growing project needs.
- Explore partnerships with metaverse projects and decentralized social media platforms for future integration.

Phase 4: Staking App Enhancements and Metaverse Integration

- Further develop and enhance the Aneras Staking App, based on user feedback and market demands.
- Integrate decentralized social media functionalities within the Aneras ecosystem, fostering user engagement and interaction.
- Collaborate with metaverse projects to enable seamless integration and immersive experiences for ANE token holders.

Phase 5: Growth and Ecosystem Expansion

- Continuously improve and upgrade the Aneras ecosystem based on user feedback and market trends.
- Explore additional use cases for ANE tokens within the ecosystem and beyond.
- Expand partnerships and collaborations to drive adoption and increase utility.
- Implement community-driven governance mechanisms, allowing token holders to actively participate in decision-making processes.

- Legal and Compliance:

Aneras remains committed to adhering to relevant legal and regulatory requirements. The project collaborates with legal experts to ensure compliance and mitigate any potential legal risks associated with the decentralized social media platform, staking app, and metaverse integrations.

- Token Sale and Distribution:

we have planned a series of events to ensure widespread participation and fair distribution of our tokens. Here is an overview of our planned events:

- Airdrops:

We will kickstart our project with a series of airdrops, where a 5% of tokens will be distributed for free to eligible participants. Airdrops allow us to engage with the community and create awareness about our project.

- Presales:

We have organized three consecutive presale events to provide early supporters and investors an opportunity to acquire our tokens at discounted rates. Each presale event will have a duration of one month, ensuring a fair and inclusive process for token acquisition.

Presale 1: 1 February 2025 to 28 February 2025

Presale 2: 1 March 2025 to 30 March 2025

Presale 3: 1 April 2025 to 30 April 2025

During each presale, participants will be able to purchase tokens at a set price, allowing them to secure their allocation before the official ICO.

Initial Coin Offering (ICO):

Following the completion of the presales, we will conduct our ICO, which represents the main public sale of our tokens. The ICO provides an opportunity for the broader community to acquire tokens and participate in our project's growth.

During the ICO, tokens will be available for purchase at the designated price, and contributors will have the chance to join our project and become token holders.

We have designed this sequential approach of airdrops, presales, and ICO to ensure fair token distribution, encourage community engagement, and provide early supporters with the opportunity to participate in the project's success from the early stages.

- Risks and Challenges:

While Aneras strives to mitigate risks, potential challenges include regulatory uncertainties, market volatility, and technological complexities. The project proactively addresses these challenges through continuous monitoring, security enhancements, and strategic collaborations.

- Conclusion:

Aneras offers a transformative ecosystem, comprising a staking app, decentralized social media platform, and metaverse focus. Join us as we redefine social media, staking, and the metaverse, providing users with unparalleled opportunities for engagement and rewards.
